

ONLINE ACTIVITY #2
Personalized Linux, and Git Cheat Sheet

Linux Command	Use	Purpose
pwd	pwd	Shows the current directory.
ls	ls -la	Lists files and folders.
cd	cd Documents	Moves to another directory.
mkdir	mkdir project	Creates a new directory.
touch	touch notes.txt	Creates a new empty file.
cp	cp file.txt backup.txt	Copies a file or folder.
mv	mv old.txt new.txt	Moves or renames a file.
rm	rm notes.txt	Deletes a file.
rmdir	rmdir project	Removes an empty directory.
cat	cat notes.txt	Displays file contents.
clear	clear	Clears the terminal screen.
whoami	whoami	Shows the current user.

Git Command	Use	Purpose
git init	git init	Creates a new Git repository.
git restore	git restore file.txt	Restores a file to an earlier state. --staged removes it from staging.
git status	git status	Shows changed, staged, and untracked files. -s gives a short view.
git add	git add index.html	Places changes into the staging area. . stages all changes.
git commit	git commit -m "Update page"	Saves staged changes as a commit. -m adds a message.
git merge	git merge feature	Combines another branch into the current branch. --no-ff forces a merge commit.
git clone	git clone URL	Copies a remote repository to your computer. -b can clone a specific branch.

Git Three-Tree Architecture
Basic Flow

Working Directory > Staging Area > Repository

git add > moves changes to the Staging Area | git commit > saves staged changes to the Repository
