

Name: Lenerd McGowan

Student Number: 202300951

Course, Year & Section: BSIT 4-2

Date: 09/15/2026

1. Basic Linux commands (command, sample usage) (at least 10)

Command	Purpose	Sample Usage
ls	List directory contents	ls -la
pwd	Print current working directory	pwd
cd	Change directory	cd /Users/Lenerd
mkdir	Create a new directory	mkdir -p folder/foldera
rmdir	Delete directory or files	rmdir -r folder
cp	Copy files and directories	cp -R /rootfolder /copy_folder
mv	Move files or directories	mv /folder/file.txt /foldera
touch	Creates file	touch file.txt
zip	Zip multiple files	zip -r nazip.zip /folder && unzip nazip.zip
chmod	Change permissions of the directory or files	chmod 744 file.txt
man	Manuals for commands	man 2 ls

2. Basic Git commands (command, sample usage, description (use your own wordings), common options/flags)

git init	Initialize the git for the folder or directory	git restore	Removes the files that is not in stage or not git added
git status	Shows the status of the current git directory	git branch	Creates a branch, or manages it
git add	Add the files to the stage so that it can be committed later	git checkout / git switch	Moves to different branches
git commit	Commits the files and it is ready to be pushed	git merge	Merges current code to the other codes from other branches
git log	Show logs	git tag	Just a marker or a label
git diff	Shows the differences between commits	git clone	Clones the repository or the other branch

3. The three-tree architecture of Git

Pushing:

Working Directory -> Stage Area -> Git Repository

Pulling:

Git Repository -> Working Directory
