

ONLINE ACTIVITY #2

Personalized Linux, and Git Cheat Sheet

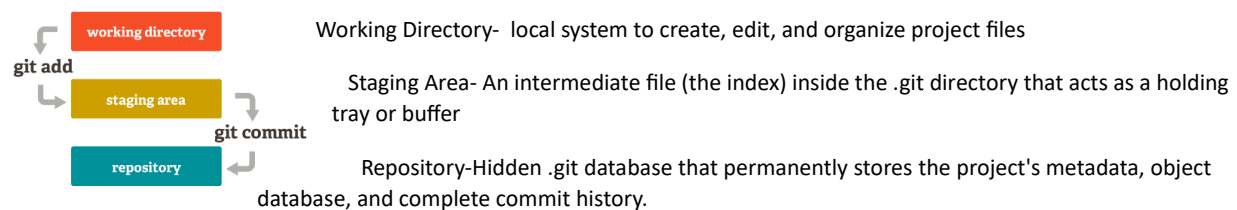

Basic Linux Commands:

1. `cd` – used for navigating between directories, changing directories. **cd Users**
2. `mkdir` – used for creating new directory. **mkdir ITEC111_LAB**
3. `pwd`- displays the full address of the current directory
4. `rmdir`- removes/delete **empty directories**(ex. those test directories)
5. `cat`- display contents and combine files to view one output. **cat file1.txt file 2.txt**
6. `sort`- used to sort file contents, it will be displayed in sorted order.
7. `mv`- for moving or renaming files and directories. **mv test.txt new.txt**
8. `cp`- copy files or directories.
9. `rm`- delete files

Basic Git commands:

git init- set an existing directory as a Git repository	git restore- undo uncommitted changes made to the files in the working directory or staging area.
git status- displays state of modified files ready for next commit, inside the working directory	git branch- serves as a separate working area outside of the main project. This will help to avoid ruining the main while being able to do other ideas.
git add- Add or move files from working directory to staged area ready for commit	git checkout- navigate branches, create, navigate history or restore files git switch-navigate between branches
git commit- Captures the project current stage and save in the local repository	git merge- incorporate changes from one branch to another
git log- shows the history of commits made in Git repository	git tag- it's like marking important points in the repository
git diff- shows the changes made but not yet staged. Basically, compare those to the ones that is in the staging area	git clone- creates a copy of the repository locally via URL

The three-tree architecture of Git:

Note: AI is used for some information as when the author search in google the information were provided by ai overview. However, the author modified those information and went to its original resources, make my own understanding and composition. **(basic git commands)**
